**Description:** This servo plate allows you to mount your standard-sized servo inside Actobotics channels. The bracket has 4 6-32 tapped holes for attaching your servo and several additional tapped holes for connecting it to a channel, either on the end, or the inside.

Actobotics is a robotics building system based around extruded aluminum channels, gears, precision shafts, and ball bearings. Thanks to the two standardized hole patterns, nearly all Actobotics components can be intuitively connected together. The wide range of components makes building complex electromechanical prototypes or finished projects a reality.
