Vision System FZ5-Series

A range of processing items for positioning and inspection

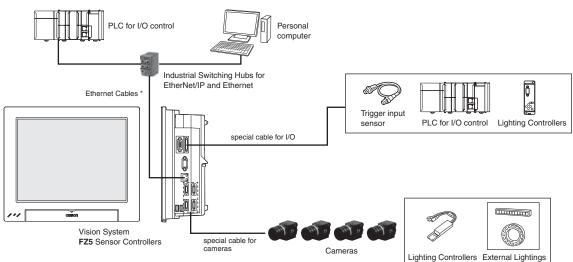

- The High-precision Object Detection Required for Positioning
- Converting Measurement Results to Output User Units
- Easily Integrate Interfaces into the Machine
- Easy Setup with Program Scalability

System configuration

EtherNet/IP, No-protocol Ethernet and PLC Link Connections

Example of the FZ5 Sensor Controllers (4-camera type)

* To use Straight or cross STP (shielded twisted-pair) cable of category 5 or higher for Ethernet and RJ45 connector.

*2

The image logging capacity changes when multiple cameras of different types are connected at the same time. Do not ground the positive terminal of the 24-VDC power supply to a Lite Controller. If the positive terminal is grounded, electrical shock may occur when an SG (0-V) part, such as the case of the Controller or Camera, is touched. The current consumption when the maximum number of cameras supported by each controller are connected. If a lighting controller model is connected to a lamp, the current consumption is as high as when an intelligent compact camera is connected.

*3

	-0	EC Corner	This processing item measures a corner position (cor- ner) of a workpiece. The center position of a crosshair shape is mea-			Position Compensation	Used when positions are differed. Correct measurement is performed by correcting position of input images.
	-0 ×	Ec Cross	sured using the lines created by the edge information on each side of the crosshair.		×	Filtering	Used for processing images input from cameras in order to make them easier to be measured. To enhance contrast of images by extracting color
	ð	Classification	Used when various kinds of products on the assembly line need to be sorted and identified.		3	Backgrond Suppression Brightness Correct	in specified brightness. Track brightness change of entire screen and
	•	Edge Position	Measure position of measurement objects according to the color change in measurement area.			Filter	remove gradual brightness change such as uneven brightness. Color image is converted into monochrome images
		Edge Pitch	Detect edges by color change in measurement area. Used for calculating number of pins of IC and			Color Gray Filter Extract Color Filter	to emphasize specific color. Convert color image to color extracted image or
	1	Scan Edge Position	connectors. Measure peak/bottom edge position of workpieces according to the color change in separated		••	Anti Color Shading	binary image. To remove the irregular color/pattern by uniformizing max.2 specified colors.
			measurement area. Measure max/min/average width of workpieces	Compensate		Stripes Removal	Remove the background pattern of vertical, horizontal
	E	Scan Edge Width	according to the color change in separated measurement area.	image	ABC	Filter II Polar Transformation	and diagonal stripes. Rectify the image by polar transformation. Useful for OCR or pattern inspection printed on circle.
	Q	Circular Scan Edge Position	Measure center axis, diameter and radius of circular workpieces.		ABC	Trapezoidal	Rectify the trapezoidal deformed
Measurement	\mathfrak{O}	Circular Scan Edge Width	Measure center axis, width and thickness of ring workpieces. Calculate approximate lines from the edge information			Correction Machine Simulator	image. How the alignment marks would move on the im- age when each stage or robot axis is controlled can
		Intersection	on two sides of a square workpiece to measure the an- gle formed at the intersection of the two lines.			Image Subtraction	be checked. The registered model image and measurement image are compared and only the
	8	Color Data	Used for detecting presence and mixed varieties of products by using color average and deviation.				different pixels are extracted and converted to an image.
		Gravity and Area	Used to measure area, center of gravity of workpices by extracting the color to be measured. Used to measure number, area and gravity of			Advanced filter	Process the images acquired from cameras in order to make them easier to measure. This processing item consolidates existing image conversion filtering into one processing item
-		Labeling	workpieces by extracting registered color. Selecting one region of extracted Labeling, and get that			Panorama	and adds extra functions. Combine multiple image to create one big image.
	••	Label Data	measurement. Area and Gravity position can be got and judged. Used for appearance measurement of plain-color			Unit Macro	Advanced arithmetic processing can be easily incorporated into workflow as Unit Macro
	M	Defect	measurement objects such as defects, stains and burrs.			Unit Calculation	processing items. This function is convenient when the user wants to cal- culate a value using an original calculation formula or
	A	Precise Defect	extraction defect can be set precisely. Difference can be detected by overlapping and		-00	Macro	change the set value or system data of a processing item.
		Fine Matching	comparing (matching) registered fine images with input images. Recognize character according correlation search		ABC	Calculation	Used when using the judge results and measured values of ProcItem which are registered in processing units.
	AB	Character Inspect	with model image registered in [Model Dictionary]. Reading character string is verified with internal		+++++++++++++++++++++++++++++++++++++++	Line Regression	Used for calculating regression line from plural measurement coodinate.
	Date 08:02:1	Date Verification	date. Register character pattern as dictionary. The		${\rm O}_{\rm C}^{\rm C}$	Circle Regression	Used for calculating regression circle from plural measurement coordinate.
		Model Dictionary 2DCode *2	pattern is used in [Character Inspection]. Recognize 2D code and display where the code			Precise Calibration	Used for calibration corresponding to trapezoidal distortion and lens distortion. Used for setting of the data that can be used as
-		Barcode *1	quality is poor. Recognize barcode, verify and output decoded characters.		User	User Data	common constants and variables in scene group data.
	OCR	OCR	Recognize and read characters in images as character information.	Support		Set Unit Data	Used to change the ProcItem data (setting parameters,etc.) that has been set up in a scene.
-	OCR	OCR User Dictionary	Register dictionary data to use for OCR.	measurement	B -	Get Unit Data	Used to get one data (measured results, setting parameters,etc.) of ProcItem that has been set up in a scene.
		Circle Angle	Used for calculating angle of inclination of circular measurement objects.			Set Unit Figure	Used for re-setting the figure data (model, measurement area) registered in an unit.
	1	Glue Bead Inspection	You can inspect coating of a specified color for gaps or runoffs along the coating path.		*	Get Unit Figure	Used for get the figure data (model, measurement area) registered in an unit.
Input Image		Camera Image Input	To input images from cameras. And set up the conditions to input images from cameras. (To FZ5 Sensor Controllers only)			Trend Monitor	Used for displaying the information about results on the monitor, facilitating to avoid NG and analyze causes.
Input Image		Camera Image Input FH I lers only				Image Logging	Used for saving the measurement images to the memory and USB memory.
		1			a →	Image Conversion Logging	Used for saving the measurement images in JPEG and BMP format.
					25	Data Logging	Used for saving the measurement data to the memory and USB memory.
					ô9	Elapsed Time	Used for calculating the elapsed time since the measurement trigger input. Processing is stopped only at the set time. The
					X	Wait	standby time is set by the unit of [ms].

Group	Icon Processing Item		Group	Icon		Processing Item		
	2	Focus	Focus setting is supported.	Branch		Conditional Branch	Used where more than two kinds of products on the production line need to detected separately.	
	*o	Iris	Focus and aperture setting is supported.		8 0	End	This ProcItem must be set up as the last processing unit of a branch.	
	000	Parallelize*3	A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed at the top of processing to be performed in parallel. A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed im- mediately before processing to be performed in paral- lel between Parallelize and Parallelize End.		1000 C	DI Branch	Same as ProcItem "Branch". But you can change the targets of conditional branching via external inputs.	
						Control Flow Normal	Set the measurement flow processing into the wait state in which the specific no-protocol command can be executed.	
	ŪŪ⊕Ū)	Parallelize Task*3				Control Flow PLC Link	Set the measurement flow processing into the wait state in which the specific PLC Link command can be executed.	
						Control Flow Parallel	Set the measurement flow processing into the wait state in which the specific parallel command can be executed.	
		Statistics	Used when you need to calculate an average of multiple measurement results.			Control Flow Fieldbus	Set the measurement flow processing into the wait state in which the specific Fieldbus command can be executed.	
	1	Referrence Calib Data	Calib compensation data held under other processing items can be referenced.		змітсн фф	Selective Branch	Easily branch to multiple destinations.	
	The second	Position Data Calculation	The specified position angle is calculated from the measured positions.			Data Output	Used when you need to output data to the external devices such as PLC or PC via serial ports.	
Support	+	Stage Data	Sets and stores data related to stages.			Parallel Data Output	Used when you need to output data to the external devices such as PLC or PC via parallel ports.	
measurement	P 0	Robot Data	Sets and stores data related to robots. This processing item automatically calculates the entire axis			Parallel Judgement Output	Used when you need to output judgement results to the external devices such as PLC or PC via parallel ports.	
		Vision Master Calibration	movement amount of the control equipment necessary for calibration.		000	Fieldbus Data Output	Outputs data to an external device, such as a Programmable Controller, through a fieldbus interface.	
		PLC Mastoer Calibration	Calibration data is created using a communication command from PLC.		ок	Result Display	Used for displaying the texts or the figures in the	
	ţ	Convert Position Data	The position angle after the specified axis move- ment is calculated.	Code 39 GS1-128		Display Image File	camera image. Display selected image file.	
	4/	Movement Single Position	The axis movement that is required to match the mea- sured position angle to the reference position angle is calculated.		NG	Display Last NG Image	Display the last NG images.	
	#	Movement Multi Points	The axis movements that are required to match the measured position angles to the corresponding ref- erence position angles are calculated.		 Integration (Integration of the state of the			
	+	Detection Point	Obtains position/angle information by r eferring to the coordinate values measured with the Mea- surement Processing Unit.	*2 2D Code				
		Camera Calibration	By setting the camera calibration, the measure- ment result can be converted and output as actual dimensions.					
	÷9	Data Save	The set data can be saved in the controller main unit or as scene data. The data is held even after the FH/FZ power is turned off.

Meaning of Optical Chart

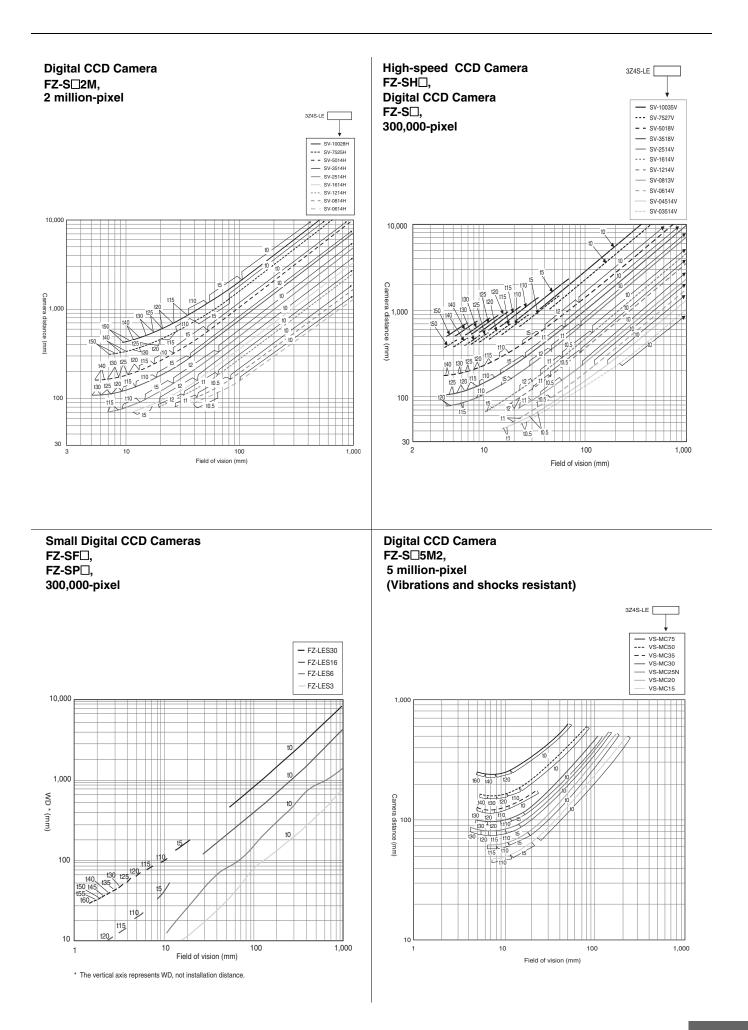

The X axis of the optical chart shows the field of vision (mm) (*1), and the Y axis of the optical chart shows the camera installation distance (mm) (*2).

 The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.

*2. The vertical axis represents WD for small cameras.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Note: Do not use this document to operate the Unit.
